

Department of Computer Science and Engineering

WEEKLY LOG-SHEET

Project Title:	Automated Exam Seating Management System
Date:	5 th June 2026
Group:	CE-I-II(B)
Year:	1 st year
Meeting Number:	

Name of the student	Roll no. / Regd. No.
Aashish Dangal	07
Pratisthit Khaniya	42
Shresh Khanal	41
Shreeshant Jha	33
Nasala Lakhey	45

Task Description:

Task Accomplished	Tasks to be Accomplished
<i>Student Name: Aashish Dangal</i> Task you have done. 1. Project infrastructure completed(Cmake build, Git,docs,14 rules) 2. Seat code generation Utility(normalVenueName). 3. Fully implemented with multi-rule name normalization.	1. Core seat allocation engine(backtracking solver)
<i>Student Name: Pratisthit Khaniya</i> Task you have done. 1. Designed and implemented a basic Qt-based UI layout for application. 2. Completed rough working build of Qt GUI	1. Refining the GUI accordingly and connecting frontend with backend.
<i>Student Name: Shresh Khanal</i> Task you have done. 1. Analyzed requirements and designed the validation module. 2. Planned input workflows for student and room files. 3. Formulated logic for 14 seating rules.	1. Create header files for data structures and rules. 2. Code the validation functions for files. 3. Setup a main driver for initial unit testing. 4. Implement the 14 concrete seating rules.
<i>Student Name: Shreeshant Jha</i> Task you have done. 1. Created the modular class architecture across student.cpp and student.hpp to	1. Finish the file handling and sorting loops in main.cpp as soon as the supervisor provides the final spreadsheet data.

securely store all student information. <i>Student Name: Nasala Lakhey</i> Task you have done. 1. Created Github repository for team collaboration. 2. Created "src/" and "include/" directory structure in the main branch for team use. 3. Implemented .cpp and header files in branch.	1. Refining logic in cpp and header files. 2. Add SQLite integration to persist hall and room data. 3. Understand the functionality of Qt.
